WORK EXPERIENCE

JP MORGAN CHASE

Bengaluru, India

SDE II

Jan 2026 – Present

- Developed a **Next.js-based data platform portal** for data pipelines, enabling client self-service ingestion workflows and streamlined data asset management, **reducing engineering onboarding effort by 40%**
- Architected **distributed cloud ingestion pipelines** across **AWS Lambda, ECS, and Databricks**, processing **1M+ financial records daily** with high availability, low latency, and reliable sync across downstream systems.
- Re-architected the portal user journey into **IDE-executable agent skills**, automating flows from platform registration to pipeline triggering and reducing onboarding SLA **from 1 week to 3 days**.
- Created a centralized inventory service using **Java Spring Boot** and **PostgreSQL** as a single source of truth for all platform entities across **9 services**, eliminating cross-service data duplication and keeping sensitive metadata fully in-house.

SDE I

Jan 2023 – Dec 2025

- Created a **Storybook-based reusable React UI library**, increasing component reuse by **2x** and improving the long-term maintainability of the portal frontend.
- Implemented **RBAC-based entitlements** to enforce secure access control across platform resources, supporting **100+ users** and multiple role tiers
- Engineered an **LLM-powered SQL translator (Python & React)** that automated **100+ business data validation rules**, reducing dependency on engineering teams and improving rule adoption efficiency.
- Optimized a large-scale data pipeline handling a **20B+ record validation exception table** by introducing **table partitioning** to prevent full table scans and resolve concurrency-related failures.

Software Engineer Intern

June 2022 – July 2022

- Built a **Java Spring Boot application** for S3 file uploads, deployed on AWS ECS, **reducing manual effort by 90%**

EDUCATION

Bachelor's in Electronics and Computer Engineering

Punjab, India | Aug 2019 - June 2023

THAPAR INSTITUTE OF ENGINEERING AND TECHNOLOGY [CGPA - 9.22]

PROJECTS

WAY FOR LIFE - NGO'S VOLUNTEER TRACKER [🔗](#)

REACT, MONGODB, EXPRESS, NODE

- Built a **MERN-based platform** for NGOs and volunteers, enabling seamless event registration and real-time participation tracking – **reducing manual tracking by 75%** and **boosting engagement by 30%**.

DBOT - DSA PROGRESS TRACKER [🔗](#)

NEXT.JS, FLASK, GENAI

- Developed a **GenAI-powered chat app** using **LLaMA 3 (Next.js + Flask/Node)** to enhance interview preparation tracking, task planning and boost **daily productivity**
- Engineered persistent data storage with MongoDB, enabling the chat application to **retain 95% of user data** across sessions and improving recall of personalized LeetCode suggestions and bot interactions.

SKILLS

Languages: C++, Java, Python

Backend: Spring Boot, Microservices, AWS Services

Frontend: React.js, Next.js

Databases: MongoDB, PostgreSQL

Services: Databricks, Spinnaker, Datadog

ACCOMPLISHMENTS

- AWS Certified Cloud Practitioner
- Won 1st place in a 24-hour JPMC hackathon 2024
- Delivered a lecture on "YAML Reusability" at DevOps Forum
